

# Microsoft Assessments Review

**Determine your cloud & on-premises posture** before someone else does.

Securing your Microsoft environment and data is a critical part of moving workloads to the cloud. Default security provided by cloud vendors may seem effective, but each of the settings must be defined and evaluated regularly.

In a tailored Microsoft Security Assessment, our team of Office 365 experts identifies key elements to secure your environment and protect critical data. We apply our proven processes to a customized analysis of your organization, producing clear, risk-based recommendations and a comprehensive roadmap to continually mature your posture.

## Why a cloud security assessment?

In the cloud, who is responsible for the security of your data —you or the cloud provider? While many business leaders leave this responsibility to the cloud provider, true cloud security must be a collaborative effort. A Microsoft Security Assessment pinpoints misconfigured areas of your Office 365, Windows and Active Directory environments that threaten the security posture of your organization. We'll assess authentication controls, determine the number of highly-privileged accounts, audit log reviews and external sharing of data and more. Reviewing controls against the specific needs of your organization allows you to protect your data and maintain good security practices in all aspects of your Microsoft investment.

Novacoast has been successfully implementing Office 365 and on-premises Microsoft solutions for customers for years, balancing organization-specific security necessities with the needs of users. Our expertise in Office 365, Active Directory, Windows, networking, cybersecurity and data protection inform tailored solutions for your company's specific strategic and technical requirements.

## Certified Microsoft Partner

We have the skilled personnel, cybersecurity advisors, attack simulators, network scanners and overall technology expertise to evaluate your security posture and help mature the security of your cloud and on-premises environment.

# Microsoft Assessments for Cloud Security

## A Four-Part Assessment

Kickoff Workshop	Azure Cost Optimization	Microsoft 365 Licensing Review	Expert Knowledge
<p>Summarize the engagement: vision &amp; objectives, requirements, actions &amp; next steps</p> <ul style="list-style-type: none"><li>Review the Microsoft Security Story &amp; why they are the largest security company on the planet</li><li>Explain global threat telemetry &amp; use of AI to share data across 200+ brands</li></ul>	<ul style="list-style-type: none"><li>Review organization's cloud usage &amp; adoption, current security requirements &amp; objectives, and assess pertinent regulations (HIPAA, SOX, GDPR)</li><li>This questionnaire establishes security context to inform recommendations &amp; guidance</li></ul>	<ul style="list-style-type: none"><li>Provide a documented evaluation of cloud &amp; on-premises security posture</li><li>Review major findings &amp; mitigation recommendations, organized into high, medium &amp; low remediation priority</li><li>Develop security awareness &amp; education best practices</li></ul>	<ul style="list-style-type: none"><li>Review methodology to implement high, medium, and low changes to secure environment</li><li>Provide a roadmap of how best to address the issues identified</li><li>Explain why periodic evaluations are required. Security is not a finish line to cross, but an ongoing journey</li></ul>

## Advisors who earn your trust.

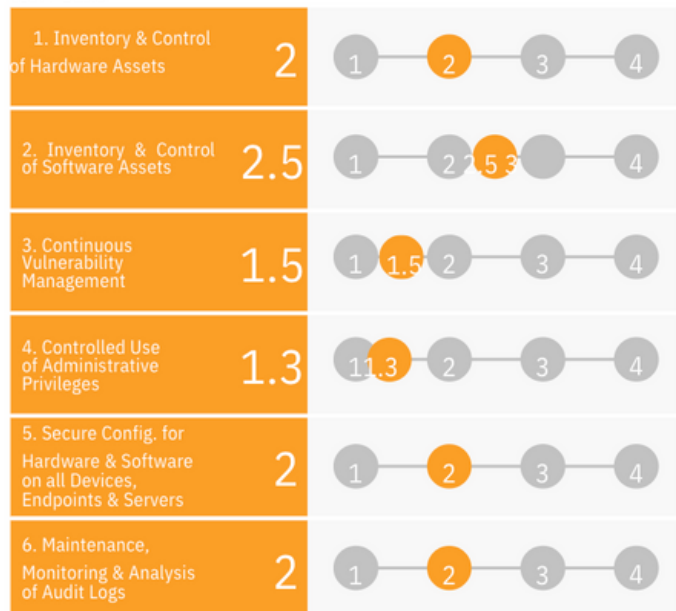

Whether you are migrating to O365 and need to establish and enforce security policy, or you are using O365 and have to secure tenant & data, we can help. Our proven tools and processes identify the most critical controls for your environment. Decades of experience across industries of every size inform the prioritization and implementation of controls in custom phases. Our end-to-end approach minimizes disruptions to users, and begins with a comprehensive organizational assessment and detailed review of recommendations, next steps and best practices. And since security is a continuous process, we offer a monthly review of current recommendations and posture roadmap.

## What's next?

Novacoast offers monitoring for Office 365 Cloud services to continually manage the security of your environment. Security is not a finish line, but rather a journey that we are on together. Let us be your trusted security consultants and monitoring team. Learn more at
