

Continuous Testing Service

From Reactive to Proactive Security

The Problem

CVE Fatigue: Every day 110+ CVEs are produced daily. Not all are exploitable, so how do you know which ones to fix?

Penetration Déjà Vu: Year after year, the same findings appear in security assessments, as customers struggle to remediate findings.

Remediation Gaps: Fixes are often delayed or long forgotten, leaving persistent vulnerabilities.

Moving to a Continuous Testing Cycle (Test → Fix → Verify)

Move from a one-time-a-year checkup to a living, iterative security process.

- Ongoing testing makes your environment tougher over time
- Frequent remediation ensures real security progress
- Verifiable fixes – no more “assumed patched” vulnerabilities

How it Works

Continuous Pentesting Program

Standard Penetration Test

- In-depth Assessment
- Annual Compliance Req.
- Can go beyond Ext/Int
- Inform Priorities & Key Issues

Annual / Bi-Annual

Autonomous Testing

Test

- Quick Tests (Ext & Int)
- Exploitable Vulns & Misconfigs
- Validate Sec. Tools & Response

- Red Team Consulting (T&M)

Remediate

- Harden Sec Tools
- Patch & Update

In Between Pentests (Quarterly/Monthly/Weekly)
